

Strip Curtains

After many years of design and development, the **EnviroFlex** Strip Curtains are ideal for virtually any independent application, including warehouses, hospitals, refrigeration rooms, food & chemical factories and abattoirs.

Ideal for heavy traffic applications

The **EnviroFlex** Strip Curtain System has a unique hinge system, which allows each strip to swing freely, without bumping into the lintel, thereby prolonging the lifespan of the door. In addition, each PVC strip is reinforced, making it more durable.

For lighter traffic applications...

QuickMount™ STRIP DOOR HARDWARE SYSTEM Made from tough, durable polymer compounds, this version is designed for cold environments and is ideal for food service applications. Strip installation is much faster. The Quick Mount system is very strong and the PP version can be used for temperatures of -25°C.

PvC Strips are available in a range of types and sizes...

Standard

- For standard applications
- Available in 200x2mm / 300x3mm / 400x4mm*

Polar

- For cold chain applications up to -45°C
- Available in 200x2mm / 300x3mm *

Anti-Bacterial *****NEW*****

- Stop-Bac PVC against bacterial contamination
- Available in 200x2mm / 300x3mm / 400x4mm*

Anti-Insect *****NEW*****

- Stop-Insect PVC against insects and other pests
- Available in 200x2mm / 300x3mm *

Welding

- Strips or sheets in various sizes*

*Other sizes available on request

Advantages

- Prolonged life span
... unique hinge system & reinforced strips
- Energy saving
...overlapping strips of PVC ensure minimal influx of cool or warm air
- Ease of access
...flexibility of PVC allows for ease of access for people or vehicles
- Safety
...transparency of PVC allows for good visibility
- Cost effective
...partial replacement of strips is possible
- Custom made
...the Strip Curtains can be manufactured and fitted to any door size

Strip Curtain Order Data

Strip Curtain selection

Our strip curtains are available in different widths, thicknesses and colours. In smaller doors, we use smaller strips which are easier to pass through. As the door gets taller, the width of the strip needs to increase to maintain easy passage. Taller doors typically require more overlap for better air block. Drafty or windy conditions or heavy mechanical traffic such as forklifts require thicker PvC.

What information is needed for a quote?

- The size of the opening (i.e. width and height of opening)
- Location and type of opening (e.g. freezer, warehouse, wash bay, kitchen, store room)
- Function or purpose of the strip curtains (e.g. pedestrians, trolleys, trucks, forklifts)
- Type of hanging (e.g. ceiling mount, lintel mount, shower mount, wall mount)

How do I measure for a strip curtain?

You measure the inside width (W) and height (H) of the opening – this will help us determine what overlap to allow for the strip.
